

SGM8358

1MHz, 60 μ A, Rail-to-Rail I/O CMOS Operational Amplifier

GENERAL DESCRIPTION

The SGM8358 is a dual, low cost, voltage feedback amplifier. The device can operate from 2.1V to 5.5V single supply, while consuming only 60 μ A quiescent current per amplifier. It provides rail-to-rail input with a wide input common mode voltage range and rail-to-rail output voltage swing. This feature makes SGM8358 appropriate for buffering ASIC.

The SGM8358 offers a gain-bandwidth product of 1MHz and an ultra-low input bias current of 10pA. It is well suited for piezoelectric sensors, integrators and photodiode amplifiers.

The SGM8358 is designed into a wide range of applications, such as battery-powered instrumentation, safety monitoring, portable systems, and transducer interface circuits in low power systems.

The SGM8358 is available in a Green SOIC-8 package. It is specified over the extended -40 $^{\circ}$ C to +85 $^{\circ}$ C temperature range.

FEATURES

- **Low Cost**
- **Input Offset Voltage:**
Amplifier A: 0.8mV (TYP)
Amplifier B: 5mV (TYP)
- **Ultra-Low Input Bias Current: 10pA**
- **Unity-Gain Stable**
- **Gain-Bandwidth Product: 1MHz**
- **Rail-to-Rail Input and Output**
- **Supply Voltage Range: 2.1V to 5.5V**
- **Input Voltage Range:**
-0.1V to 5.6V with $V_S = 5.5V$
- **Low Supply Current: 60 μ A/Amplifier**
- **-40 $^{\circ}$ C to +85 $^{\circ}$ C Operating Temperature Range**
- **Available in a Green SOIC-8 Package**

APPLICATIONS

ASIC Input or Output Amplifiers
Piezoelectric Transducer Amplifiers
Battery-Powered Equipment
Portable Equipment
Sensor Interfaces
Medical Instrumentation
Mobile Communications
Audio Outputs
Smoke Detectors
Notebook PCs
PCMCIA Cards
DSP Interfaces

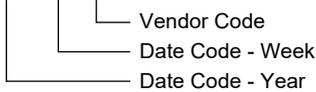

PACKAGE/ORDERING INFORMATION

MODEL	PACKAGE DESCRIPTION	SPECIFIED TEMPERATURE RANGE	ORDERING NUMBER	PACKAGE MARKING	PACKING OPTION
SGM8358	SOIC-8	-40°C to +85°C	SGM8358YS/TR	SGM8358YS XXXXX	Tape and Reel, 4000

MARKING INFORMATION

NOTE: XXXXX = Date Code and Vendor Code.

XXXXX

Green (RoHS & HSF): SG Micro Corp defines "Green" to mean Pb-Free (RoHS compatible) and free of halogen substances. If you have additional comments or questions, please contact your SGMICRO representative directly.

ABSOLUTE MAXIMUM RATINGS

Supply Voltage, +V _S to -V _S	6V
Input Common Mode Voltage Range	(-V _S) - 0.3V to (+V _S) + 0.3V
Package Thermal Resistance @ T _A = +25°C	
SOIC-8, θ _{JA}	125°C/W
Junction Temperature	+150°C
Storage Temperature Range	-65°C to +150°C
Lead Temperature (Soldering, 10s)	+260°C
ESD Susceptibility	
HBM	4000V
MM	400V

can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because even small parametric changes could cause the device not to meet the published specifications.

RECOMMENDED OPERATING CONDITIONS

Operating Temperature Range	-40°C to +85°C
-----------------------------------	----------------

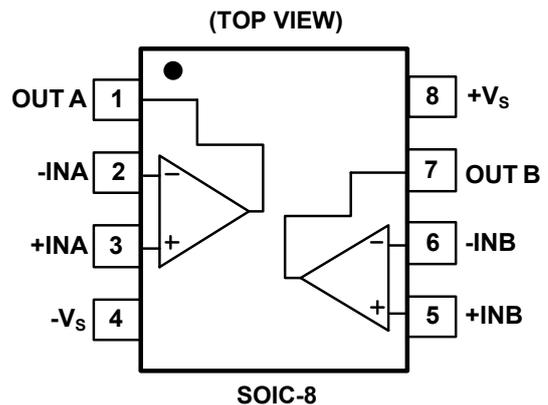

DISCLAIMER

SG Micro Corp reserves the right to make any change in circuit design, or specifications without prior notice.

OVERSTRESS CAUTION

Stresses beyond those listed in Absolute Maximum Ratings may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect reliability. Functional operation of the device at any conditions beyond those indicated in the Recommended Operating Conditions section is not implied.

PIN CONFIGURATION

ESD SENSITIVITY CAUTION

This integrated circuit can be damaged if ESD protections are not considered carefully. SGMICRO recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures

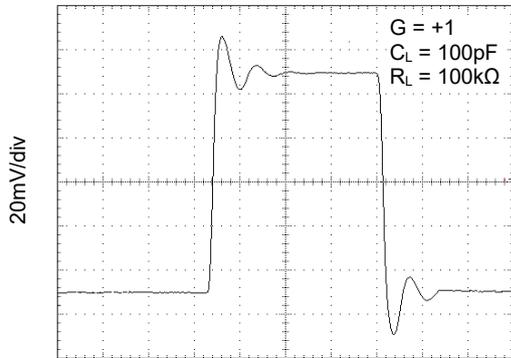

ELECTRICAL CHARACTERISTICS(At $V_S = +5V$, $R_L = 100k\Omega$ connected to $V_S/2$, and $V_{OUT} = V_S/2$, unless otherwise noted.)

APPLICATION INFORMATION

Rail-to-Rail Input

When SGM8358 works at the power supply between 2.1V and 5.5V, the input common mode voltage range is from $(-V_S) - 0.1V$ to $(+V_S) + 0.1V$. In Figure 1, the ESD diodes between the inputs and the power supply rails will clamp the input voltage not to exceed the rails.

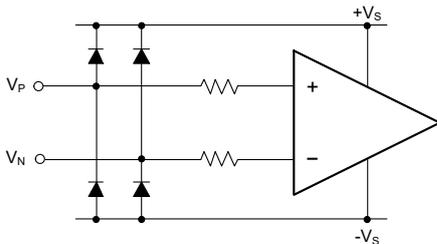

Figure 1. Input Equivalent Circuit

Rail-to-Rail Output

The SGM8358 supports rail-to-rail output operation. In single power supply application, for example, when $+V_S = 5V$, $-V_S = GND$, 100kΩ load resistor is tied from OUT pin to $V_S/2$, the typical output swing range is from 0.005V to 4.997V.

Driving Capacitive Loads

The SGM8358 is designed for unity-gain stable for capacitive load up to 250pF. If greater capacitive load must be driven in application, the circuit in Figure 2 can be used. In this circuit, the IR drop voltage generated by R_{ISO} is compensated by feedback loop.

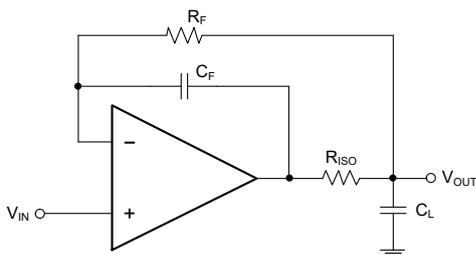

Figure 2. Circuit to Drive Heavy Capacitive Load

Power Supply Decoupling and Layout

A clean and low noise power supply is very important in amplifier circuit design, besides of input signal noise, the power supply is one of important source of noise to the amplifiers through $+V_S$ and $-V_S$ pins. Power supply bypassing is an effective method to clear up the noise at power supply, and the low impedance path to ground of decoupling capacitor will bypass the noise to GND. In application, 10µF ceramic capacitor paralleled with 0.1µF or 0.01µF ceramic capacitor is used in Figure 3. The ceramic capacitors should be placed as close as possible to $+V_S$ and $-V_S$ power supply pins.

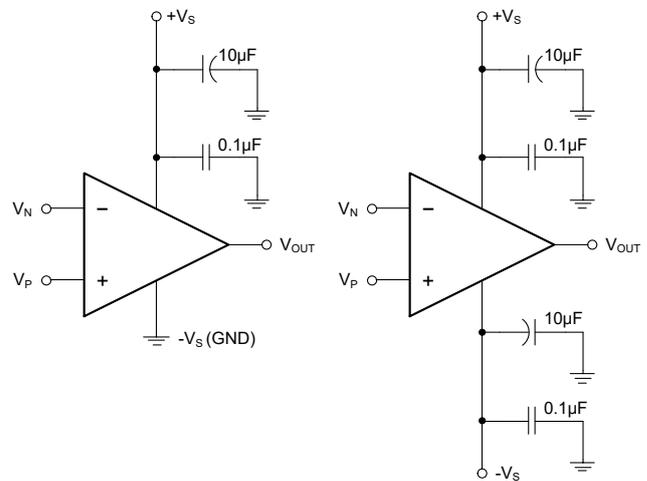

Figure 3. Amplifier Power Supply Bypassing

APPLICATION INFORMATION (continued)

Typical Application Circuits

Difference Amplifier

The circuit in Figure 4 is a design example of classical difference amplifier. If $R_4/R_3 = R_2/R_1$, then $V_{OUT} = (V_P - V_N) \times R_2/R_1 + V_{REF}$.

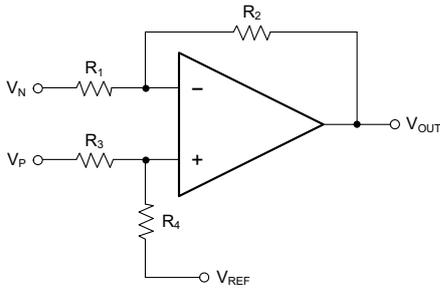

Figure 4. Difference Amplifier

High Input Impedance Difference Amplifier

The circuit in Figure 5 is a design example of high input impedance difference amplifier, the added amplifiers at the input are used to increase the input impedance and eliminate drawback of low input impedance in Figure 4.

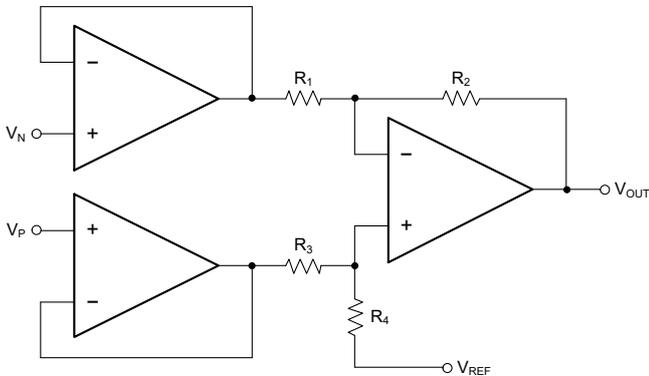

Figure 5. High Input Impedance Difference Amplifier

Active Low-Pass Filter

The circuit in Figure 6 is a design example of active low-pass filter, the DC gain is equal to $-R_2/R_1$ and the -3dB corner frequency is equal to $1/2\pi R_2 C$. In this design, the filter bandwidth must be less than the bandwidth of the amplifier, the resistor values must be selected as low as possible to reduce ringing or oscillation generated by the parasitic parameters in PCB layout.

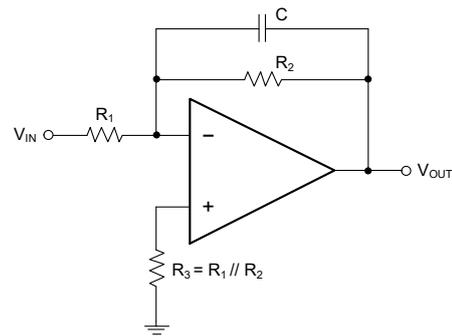

Figure 6. Active Low-Pass Filter

REVISION HISTORY

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

MARCH 2017 – REV.A.2 to REV.A.3	Page
Changed Packing Option	2

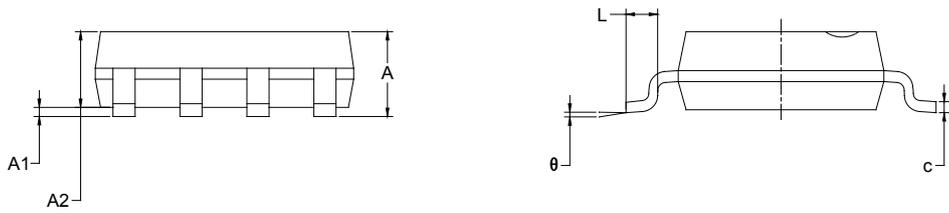

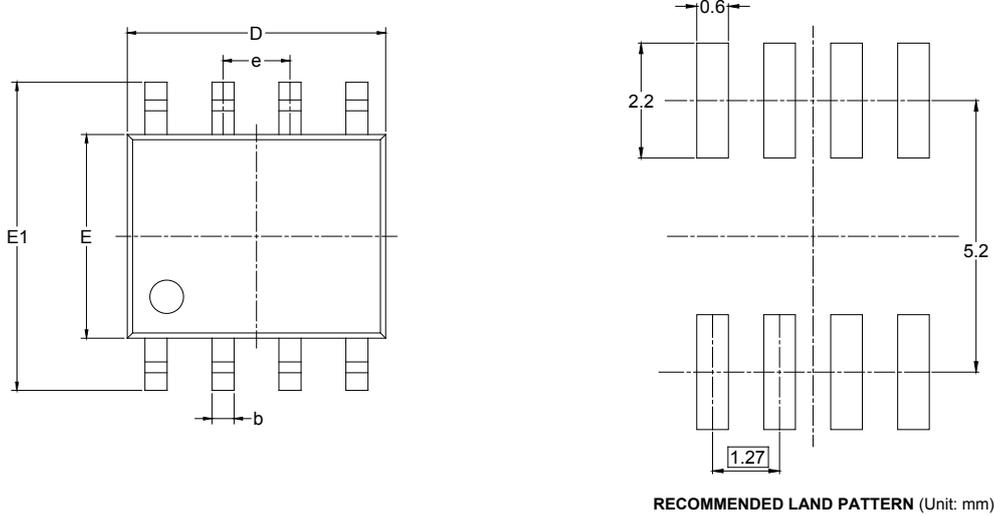

JANUARY 2013 – REV.A.1 to REV.A.2	Page
Added Tape and Reel Information section	8~9

DECEMBER 2011 – REV.A to REV.A.1	Page
Changed Electrical Characteristics section	2
Changed Absolute Maximum Ratings section	3
Changed Typical Performance Characteristics section	4~6
Changed Application Notes section	7
Updated Package Description	All

Changes from Original (MAY 2008) to REV.A	Page
Changed from product preview to production data	All
